

HITCH CONTROL

TUGGER AMR ATTACHMENT

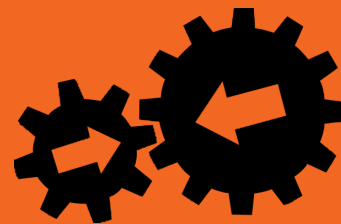

HITCH PATTERN

Customizable

15,000 LBS

Tow Capacity

Tugger

AMR Compatible

The Hitch Control is mounted to the back of the Tugger AMR, and controls the CarryMatic carts. It houses a controller with an integrated touchscreen that functions as an operator HMI. The Hitch Control sends and receives data to and from the CarryMatic Carts via ethernet cables. It communicates with the Supervisor Software over the wireless network using a wireless LAN module. The LAN module utilizes access points around the facility to connect the Hitch Control to the LAN. The Hitch Control is physically integrated into the safety circuit and motion interlock of the AMR.

Features:

- 7" HMI Touchscreen
- Emergency Stop Button
- Turn-Key System
- Wireless Connectivity
